GSK3β (phospho Ser9) rabbit pAb

NB-66-01651-50µL

GSK3β (phospho Ser9) rabbit pAb

Cat No.:NB-66-01651-50µL

For research use only

Overview

Product Name	GSK3β (phospho Ser9) rabbit pAb
Host species	Rabbit
Applications	IF;WB;IHC;IP;ELISA
Species Cross-Reactivity	Human;Mouse;Rat;Drosophila
Recommended dilutions	IF: 1:50-200 Western Blot: 1/500 - 1/2000. Immunohistochemistry: 1/100 - 1/300. Immunoprecipitation: 2-5 ug/mg lysate. ELISA: 1/5000. Not yet tested in other applications.
Immunogen	The antiserum was produced against synthesized peptide derived from human GSK3 beta around the phosphorylation site of Ser9. AA range:1-50
Specificity	Phospho-GSK3β (S9) Polyclonal Antibody detects endogenous levels of GSK3β protein only when phosphorylated at S9.
Formulation	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
Storage	Store at -20℃. Avoid repeated freeze-thaw cycles.
Protein Name	Glycogen synthase kinase-3 beta
Gene Name	GSK3B
Cellular localization	Cytoplasm . Nucleus . Cell membrane . The phosphorylated form shows localization to cytoplasm and cell membrane (PubMed:20937854). The MEMO1-RHOA-DIAPH1 signaling pathway controls localization of the phosphorylated form to the cell membrane (PubMed:20937854). .
Purification	The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.
Clonality	Polyclonal
Concentration	1 mg/ml
Observed band	48kD
Human Gene ID	2932
Human Swiss-Prot Number	P49841
Alternative Names	GSK3B; Glycogen synthase kinase-3 beta; GSK-3

	beta; Serine/threonine-protein kinase GSK3B
Background	The protein encoded by this gene is a serine-threonine kinase, belonging to the glycogen synthase kinase subfamily. It is involved in energy metabolism, neuronal cell development, and body pattern formation. Polymorphisms in this gene have been implicated in modifying risk of Parkinson disease, and studies in mice show that overexpression of this gene may be relevant to the pathogenesis of Alzheimer disease. Alternatively spliced transcript variants encoding different isoforms have been found for this gene.[provided by RefSeq, Sep 2009],
